Abstract

The ambiguous relation to formation in the Russian economy of the integrated structures of network type is ascertained. Actual efficiency of such structures is considered by the example of official financial and industrial groups during 1999-2002. Properties of groups of the different sizes and types are allocated. The adaptation of processes of integration in the Russian economy to the generated structure of the property is analyzed. Specificity of investment and innovational processes in groups of different type is opened.

Key words

Business-group, network structure, financial and industrial group, structure of the ownership, investment, innovation
